1. TARIFF FORMAT

- A. Sheet Numbering - Sheet numbers appear in the upper right corner of the page. Sheets are numbered sequentially. However, new sheets are occasionally added to the tariff. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.
- B. Sheet Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current sheet version on file with the PR-TRB. For example, the 4th Revised Sheet 14 cancels the 3rd revised Sheet 14.
- C. Paragraph Numbering Sequence - Each level of coding is subservient to its next higher level.
- D. Check Sheets - When a tariff filing is made with the PR-TRB, an updated check sheet accompanies the tariff filing. The check sheet lists the sheets contained in the tariff, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on this page if these are the only changes made to it (i.e., the format, etc. remains the same, just revised revision levels on some pages). The tariff user should refer to the latest check sheet to find out if a particular sheet is the most current on file with the PR-TRB.

.13 Interruption of Service

It shall be the obligation of the subscriber to notify the Carrier of any interruption of service. Before giving such notice, the subscriber shall ascertain that the trouble is not being caused by any action or omission of the subscriber or is not in the wiring or equipment connected to the terminal of the Carrier.

When services are interrupted, credit is allowed on demand to the Carrier, computed as set forth below, provided such interruption is not shown by the Carrier to have been caused by the negligence or willful action of the subscriber, or any other persons at a subscriber terminal location, or is not caused by the failure of the subscriber's equipment or power supply.

Credit is computed by multiplying the monthly rate for the service by the ratio that the number of hours in the period of interruption bears to 720 hours. For the purpose of this computation, each month shall be considered to have 720 hours. The credit will be based on the non-usage charges for the month during which the interruption occurred. For other services, an interruption is measured from the time the Carrier detects trouble, or the subscriber notifies the Carrier of the interruption by an expeditious means, until the trouble is cleared. Each interruption is considered separately for purposes of establishing credit allowance. Interruptions shall be accumulated to the nearest half-hour period.

Customers will be credited for an interruption of thirty (30) minutes or more at the rate of 1/1440 of the applicable monthly charge for each thirty (30) minutes or major fraction thereof that the interruption continues. An interruption period begins when the customer releases the circuit to Sprint for fault isolation and testing and ends when the circuit is returned to the customer. No credit will be given for an interruption of service of less than thirty (30) minutes. Each interruption is considered separately for the purpose of establishing credit allowance. Interruptions shall be accumulated to the nearest half-hour period. The credit for a monthly billing period shall not exceed the monthly rate.
